React Native
- It is a cross platform library for building mobile native applications.
- PWA Progressive Web Application
- Unified experience across devices [Unified UX]
- Android , iOS, window native apps.
- It provides native components, which can run on any device.

```
React Native UI      Android       iOS            Web
<View>           <ViewGroup>   <UIView>         <div>
<Text>           <TextView>    <UITextView>      <p>
<Image>          <ImageView>   <UIImageView>    <img>
<ScrollView>                                 <div> scrollable
<TextInput>                                  <input type="text">
<StyleSheet>
<Switch>
<FlatList>
<SectionList>
<Alert>
<Modal>
<StatusBar>
```

- React Native Application is controlled by using
     "Expo-CLI"
   [Command Line Tool]

C:\> npm install -g expo-cli

- Create a new React Native App

 D:\> expo init app-name

- Choose "TypeScript Tabs" template

Ionic Framework

> npm install -g @ionic/cli

> npm install -g native-run cordova-res

- Creating App

⑦
D:\> ionic start appname   tabs --type=react --capacitor
